

EDUFAIR 2023

On December 13, 2023, Mount Carmel College organized an Edufair with the objective of creating awareness among pre-university students and exposing them to the latest advancements and career opportunities in the field of Science. The event aimed to inspire young minds by showcasing the diverse possibilities within scientific disciplines.

The Department of Botany played a significant role in the Edufair by setting up interactive stalls designed to engage students of the 11th and 12th grades. These stalls were thoughtfully curated to highlight both academic and co-curricular activities, emphasizing the critical importance of studying Plant Sciences. Through meticulously crafted models and innovative activities, the department showcased the multifaceted nature of Botany and its applications in real-world scenarios.

The displays covered a wide range of topics, including plant physiology, ecology, genetics, and sustainable practices. Students were provided with hands-on opportunities to interact with models, experiments, and live demonstrations that illustrated fundamental concepts in Plant Sciences. In addition to academic insights, the stalls also featured co-curricular initiatives such as herbal gardening, environmental conservation projects, and the use of botanical knowledge in everyday life.

The engaging activities captured the interest of students, fostering curiosity and encouraging them to consider Plant Sciences as a vital and exciting area of study. The department's efforts were instrumental in demonstrating the relevance of Botany in addressing global challenges such as climate change, biodiversity loss, and sustainable development, thereby motivating students to explore careers in this field.
